

Botany in Action!

Join the crew on Sunday morning Join a group of volunteers "giving back!" At Tandy Hills Natural Center help with picking up trash, trail clearing, invasive species removal and more. Continental Breakfast, Lunch, water bottle and T-shirt provided and the good feeling of helping our host city!

Tandy Hills Natural Area (THNA) is a 160-acre indigenous remnant prairie located in Fort Worth, Texas. The land was obtained by the City of Fort Worth in 1960 and designated a natural area in 1987. Noted for its unusually complete collection of prairie flora, THNA contains more than 600 native plant species. The show of spring wildflowers is unsurpassed in the Metroplex. The land is a living example of how most of Fort Worth and the Great Plains appeared in predevelopment times. THNA is adjacent to I-30 and less than 5 minutes from downtown Fort Worth, Texas. The fact that it has never been plowed or developed and survived into the 21st century in relatively pristine condition is remarkable. Volunteers will help with maintenance tasks such as picking up trash, trail clearing, woody/invasive species removal, and possibly herbicide treatments.
